```
The specification describes polypeptides that bind April or BAFF. The polypeptides inhibit APRIL or BAFF binding to B-cell maturation antigen (BCMA). APRIL and BAFF are tumor necrosis Family (TNF) members. The polypeptides of the invention are useful for treating immune-related diseases, such as rheumatoid arthritis, multiple sclerosis, and systemic lupus erythematosus; cancer such as leukemia, lymphoma, or multiple scleroms; or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and inflammation. The present sequence represents a BCMA-Fc fusion protein, where I22 of BCMA is changed to Lys.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           APRIL; BAFF; immune disorder; immunomodulator; antiinflammatory; cancer; cytostatic; neoplasm; immunosuppressive; therapeutic.
                                                                                                                                                                                                                                                                                                   New polypeptides that inhibit APRIL and/or BAFF binding to BCMA, useful for treating immune-related disease, cancer or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and inflammation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The specification describes polypeptides that bind APRIL or BAFF. The polypeptides inhibit APRIL or BAFF binding to B-cell macuration antigen (BCMA). APRIL and BAFF are tumor necrosis family (TMF) members. The polypeptides of the invention are useful for treating immune-related diseases, such as rheumatoid arthritis, multiple sclerosis, and systemic lupus erythematosus; cancer such as leukemia, lymphoma, or multiple scleroma; or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and inflammation. The present sequence represents polypeptide of the invention that binds APRIL, derived from

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      į.
                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                              The specification describes polypeptides that bind April or BAFF. The polypeptides inhibit APRIL or BAFF binding to B-cell maturation antigen (BCWA). APRIL and BAFF are tumor necroals family (TNF) members. The polypeptides of the invention are useful for treating immune-related diseases, such as rheumatoid arthritis, multiple sclerosis, and systemic lupus erythematosus; cancer such as leukemia, lymphoma, or multiple scleromi, or T-cell mediated disease such as graft rejection, graft versus host disease (GYHD) and inflammation. The present sequence represents a polypeptide of the invention, derived from formula II (see AEC02021), that that bind BAFF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               APRIL, BAFP, immune disorder, immunomodulator, antiinflammatory, cancer, cytostatic, neoplasm; immunosuppressive; therapeutic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The specification describes polypeptides that bind April or BAFF. The polypeptides inhibit APRIL or BAFF binding to B-cell maturation antigen (BCMA). APRIL and BAFF are tumor necrosis family (TNF) members. The polypeptides of the invention are useful for treating immune-related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New polypeptides that inhibit APRIL and/or BAPF binding to BCMA, useful for treating immune-related disease, cancer or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and
                                            New polypeptides that inhibit APRIL and/or BAFF binding to BCMA, useful for treating immune-related disease, cancer or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The specification describes polypeptides that bind April or BAFF. The polypeptides inhibit APRIL or BAFF binding to B-cell maturation antigen (BCMA). APRIL and BAFF are tumor necrosis family (TNF) members. The polypeptides of the invention are useful for treating immune-related diseases, such as rheumatoid arthritis, multiple sclerosis, and systemic such as leukemia, lymphoma, or multiple scleroma; or T-cell mediated disease such as graft rejection, graft versus host disease (QVHD) and inflammation. The present sequence
diseases, such as rheumatoid arthritis, multiple sclerosis, and systemic lupus erythematosus; cancer such as leukemia, lymphoma, or multiple scleroma; or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and inflammation. The present sequence represents a polypeptide of the invention, derived from formula II (see AEC02021), that that bind BAFF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            APRID; BAFF; immune disorder; immunomodulator; antiinflammatory; cancer; cytostatic; neoplasm; immunosuppressive; therapeutic; B-cell maturation antigen; BCMA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New polypeptides that inhibit APRIL and/or BAFF binding to BCMA, useful for treating immune-related disease, cancer or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gape

The specification describes polypeptides that bind APRIL or BAFF. The polypeptides inhibit APRIL or BAFF binding to B-cell maturation antigen (BCMA). APRIL and BAFF are tumor necrosis family (TNF) members. The polypeptides of the invention are useful for treating immune-related diseases, such as rheumatoid arthritis, multiple sclerosis, and systemic lupus erythematosus; cancer such as leukemia, lymphoma, or multiple scleroms; or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and inflammation. The present sequence represents polypeptide of the invention that binds APRIL, derived from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        APRIL, BAFF, immune disorder; immunomodulator; antiinflammatory; cancer; cytostatic; neoplasm; immunosuppressive; therapeutic.
                                                                                                                                                                                                                                                  New polypeptides that inhibit APRIL and/or BAFF binding to BCMA, useful for treating immune-related disease, cancer or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Formula II derived polypeptide H that binds BAFF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     94.0%; Score 189; DB 9;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The specification describes polypeptides that bind APRIL or BAFF. The polypeptides inhibit APRIL or BAFF binding to B-cell maturation antigen BCRAA). APRIL and BAFF are tumor necrosis family (TNF) members. The polypeptides of the invention are useful for treating immune-related diseases, such as rheumatoid arthritis, multiple sclerosis, and systemic lupus erythematosus; cancer such as leukemia, lymphoma, or multiple scleroms; or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and inflammation. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     APRIL; BAFF; immune disorder; immunomodulator; antiinflammatory; cancer; cytostatic; neoplasm; immunosuppressive; therapeutic.
                                                                                                                                                                                            APRIL; BAFF; immune disorder; immunomodulator; antiinflammatory; cancer; cytostatic; neoplasm; immunosuppressive; therapeutic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        for treating immune-related disease, cancer or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 polypeptides that inhibit APRIL and/or BAFF binding to BCMA,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .;

The specification describes polypeptides that bind APRIL or BAFF. The polypeptides inhibit APRIL or BAFF binding to B-cell maturation antigen (BCMA). APRIL and BAFF are tumor necrosis family (TNF) members. The polypeptides of the invention are useful for treating immune-related diseases, such as rheumatoid arthritis, multiple sclerosis, and systemic lupus erythematosus; cancer such as leukemia, lymphoma, or multiple
                                                                                                                                                 The specification describes polypeptides that bind April or BAFF. The polypeptides inhibit APRIL or BAFF binding to B-cell maturation antigen (BCWA). APRIL and BAFF are tumor necrosis family (TNF) members. The polypeptides of the invention are useful for treating immune-related diseases, such as rheumatoid arthritis, multiple sclerosis, and systemic lupus erythematosus; cancer such as leukemia, lymphoma, or multiple scleromi, or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and inflammation. The present sequence represents a polypeptide of the invention, derived from formula II (see ABC02021), that that bind BAFF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            APRIL; BAFF; immune disorder; immunomodulator; antiinflammatory; cancer; cytostatic; neoplasm; immunosuppressive; therapeutic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polypeptides that inhibit APRIL and/or BAFF binding to BCMA, useful for treating immune-related disease, cancer or T-cell mediated disease such as graft rejection, graft versus host disease (GVHD) and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to the use of a BAFF receptor (BAFF.R, also known as BCMA) protein, or a BAFF.R fusion protein as an agent for the treatment of a variety of immune-related disorders. BAFF.R is a member of the TNF (tumour necrosis factor) family, acting as an immunoregulatory agent, and also plays a role in the development of hypertension and related disorders. BAFF.R, fusion proteins containing it, and BAFF.R. specific antibodies can be used for inhibiting b-call growth, dendritic cell-induced B-cell growth and maturation, and immunoglobulin production and in the treatment of autoimmune disorders. B-cell lymphoproliferative disorders, hypertension and renal disorders. The BAFF-R proteins may also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Inhibiting dendritic cell-induced B-cell growth, maturation and B-cell lympho-proliferative disorder by administering BAFF-receptor polypeptide, chimeric molecule comprising receptor or anti-BAFF-R antibody homolog.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human BAFF-R; BAFF receptor; TNF family; immunoregulatory agent; immune-related disorder; B-cell growth inhibitor; BCMA; B-cell maturation inhibitor; immunoglobulin production inhibitor; autoimmune disorder; B-cell lymphoproliferative disorder; hypertension; renal disorder; immunosuppressive disorder; HIV infection; organ transplantation; antiinflammatory; systemic lupus erythematosus; autoimmune haemolytic anaemia; Grave's disease; multiple myeloma; B-cell carcinoma; leukaemia; rapidly progressive glomerulonephritis; lymphoma; gene therapy; cancer; tumour; plasmid pJST535.

be used in the treatment of immunosuppressive disorders and HIV prifection, and in patients undergoing organ transplantation. The BAFF-R proteins or BAFF-R specific antibodies may be used for treating, suppressing or altering an immune response involving a signalling pathway between BAFF-R and BAFF, thereby inhibiting inflammation. Since BAFF-R inhibits B-cell growth and maturation it is useful for treating diseases such as systemic lupus erythematosus, autoimmune haemolytic anaemia, rapidla grave's disease, multiple myeloma, B-cell carcinomas, leukaemia, rapidly progressive glomerulonephritis, and lymphomas. Nucleic acids encoding human BAFF-R may be used in gene therapy to treat tumours, lymphomas, autoimmune disorders and inherited B-cell-associated disorders. The present sequence represents a human BAFF-R protein sequence as encoded by plasmid PASTS35. However, this BAFF-R protein sequence is 27 amino acids shorter than that given in AABG0698

crystalline Neutrokine-alpha protein, useful for designing compounds that bind, inhibit or mimic a Neurrokine-alpha protein or enhance the activity of a Neutrokine-alpha protein for treating e.g. cancer or allergic disorders.

Disclosure, Fig 4; 362pp; English.

The invention relates to a neutrokine-alpha protein in crystalline form. The crystalline neutrokine-alpha protein is useful for designing molecules that have biological activity or compounds that bind, inhibit or mimic a neutrokine-alpha protein and/or enhance the activity of a neutrokine-alpha protein. The three-dimensional structure of a neutrokine-alpha protein is useful in determining the three-dimensional of other neutrokine-alpha proteins and their homologs. The compounds that mimic,

The present sequence represents a BCMA (not defined) polypeptide. BCMA is a necrosis factor (NF)-kB activator. The method of the invention is used to identify compounds which modulate BCMA activity (and thus NF-kB activity). The specification describes a method of identifying a cotivity). The specification describes a method of identifying a cotivity increases gene expression from a promoter. The method involves contacting a library of with a cell which expression of the reporter recombinant anti-cell death gene and a reporter gene operably linked to the promoter, and then determining whether the expression of the reporter gene is altered as a result of contact with library. The method is useful for identifying polypeptides which increase or decrease gene expression from a promoter. The BCMA polypeptide or nucleic acid are useful for from a promoter. The BCMA polypeptide or nucleic acid are useful for treparing a pharmaceutical composition for treating cancer, apoptosis, viral infections, inflammatory response, such as rheumatoid arthritis, inflammatory bowel disease or septic shock. BCMA is useful for identifying compounds that modulate NF-kB expression and thus for drug
                                                                                                                                                                                               ô
            cancer, allergic disorders, or autoimmune diseases such as rheumatoid arthritis, multiple sclerosis, Crohn's disease, diabetes, systemic lupus erythematosus or asthma. This sequence represents the residues in the receptor for binding a cytokine ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 BCWA, necrosis factor-kB activator; NP-kB; gene expression; cancer; anti-cell death gene; apoptosis; viral infection; inflammatory response; rheumatoid arthritis; inflammatory bowel disease; septic shock.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to Tumour necrosis factor (TNF) and Apoliciated Leucocyte expressed Ligand 1 (TALL-1) nucleic acid molecules, proteins (including homologues), and their antibodies. The invention in particular relates to methods for regulating the interaction between TALL-1 and TALL-1 receptors (BCMA referred as B cell maturation factor) to regulate monocyte, macrophage and B lymphocyte mediated immune responses. TALL-1 protein is useful for identifying compounds that regulate B TALL-1 protein is useful for identifying compounds that regulate B sponses. TALL-1 protein is useful for identifying compounds that regulate B sponses. TALL-1 protein is useful for identifying compounds that regulate B second architis, systemic lupus cervitematosus (SLB), insulin dependent diabetes mellitus, multiple cervitematosus (SLB), insulin dependent diabetes mellitus, multiple cervitematosus (SLB), insulin dependent diabetes mellitus, multiple cervitematosus (SLB), insulin dependent diabetes mellitus, systemic lupus cancematosus autoimmune thrombocytopenia purpura, Goodpasture's syndrome, pemphigus vulgaris, acute rheumatic fever, post-streptococcal glomerulonephritis, or polyarteritis nodosa. The TALL-1 protein and its corresponding nucleic acid sequence are also useful in diagnostic assays. The present sequence is a murine B cell maturation factor (BCMA). BCMA is

The invention relates to a method for inhibiting TACI (transmembrane activator and intracellular CAML interactor) and/or B cell maturation protein (BCMA) activity in a mammal. The method comprises administering a protein (BCMA) activity in a mammal. The method comprises administering a specific binding partner for APRIL (G70, a tunmour necrosis factor-TNF c family ligand), having the consensus region of TACI, BCMA, or the TACI/C GMA, The method is useful for inhibiting activity of TACI and/or BCMA in a mammal which is useful for inhibiting activity of TACI and/or BCMA in a mammal which is useful for inhibiting activity of TACI and/or BCMA in a mammal which is useful for inhibiting activity of TACI and/or BCMA in a mammal whoch is useful for inhibiting activity of TACI and/or BCMA in a mammal whoch is useful for inhibiting activity. BCMA and TACI c antagonists are useful for treating inflammation and immune function diseases such as diarkhoea, pooriasis, allergies, pneumonia, atopic dermatitis, respiratory allergic disease (asthma, hypersensitivity lung disease), drug and insect sting allergy, inflammatory bowel disease (CCohn's disease, colitis), scleroderma, autommune disease (multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, cancer bacterial, protozoal and viral infections (HIV), atherosclerosis, cancer

                                                                                                              ï
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention provides novel tumor necrosis factor receptor zinfil4 polynucleotides ADZ67753 and polypeptides ADZ67754, expression vectors and antibodies. Human zinfil4 polypucleotides are used in claimed methods for detecting a genetic abnormality in a patient and for detecting a cancer in a patient. Recombinant zinfil4 polypeptide, optionally conjugated to a toxin, is used in a claimed method of killing cancer cells. Zinfil4 polypeptides can be used to detect ligands, agonists and antagonists. The polypeptides to be used to detect ligands, agonists and antagonists. The polypeptides, polynucleotides and antibodies may also be used in methods that modulate tumor growth, metastasis, and immunity such as separating resting from stimulated immune cells. The present sequence is that of mutine TMFR BCMA. This sequence was compared with that of mutine zinfil4 ADZ67756 in the identification of zinfil4 as a member of
with leucocyte infiltration of the skin or organs. The present sequence

The invention relates to a method for inhibiting TACI (transmembrane activator and intracellular CAML interactor) and/or B cell maturation protein (BCMA) activity in a mammal. The method comprises administering a specific binding partner for APRIL (G70, a tumour necrosis factor-TNF family ligand), having the consensus region of TACI, BCMA, or the TACI/CC BCMA extracellular consensus sequence, but not the extracellular repairs of TACI and/or BCMA in a mammal which is useful for inhibiting activity of TACI and/or BCMA in a mammal which is useful for irreating B-cell or T-cell lymphoproliferative disorders, one or more solid tumours such as lung, gastrointestinal, pancreatic or prostate tumour. APRIL, BCMA and TACI antagonists are useful for treating inflammation and immune function diseases such as diarrhea, psoriasis, allergies, pneumonia, atopic dermatitis, respiratory allergic disease (asthma, hypersensitivity lung disease), drug and insect sting allergy, inflammatory bowel disease (Crohn's disease, colitis), selenoderma, autoinemune disease (multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, bacterial, protozoal and viral infections (HIV), atherosclerosis, cancer with leurcoyche infiltration of the skin or organs. The present sequence is mouse BCMA protein-human immunoalobulin for region fusion protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Inhibiting activity of B cell maturation protein and/or transmembrane activator and intracellular cyclophilin ligand interactor, by administering a binding partner for APRIL, a tumor necrosis factor family

                                         The invention relates to a novel TALL-1-binding polypeptide comprising a defined sequence in the specification. The composition is useful in modulating the activity of TALL-1, and in treating, preventing, amediated autoimmune disease (e.g. systemic lupus prythematosus) or B-cell-mediated cancer or lymphoma. The composition may also be used in treating inflammations (e.g. rheumatoid arthritis), acute pancreatitis, Alzheimer's disease, asthma, atherosclerosis, cachexia, cirrhosis, diabetes, aplomerulonephritis, Hashimoto's thyroiditis, ischemen's disease, and vasculitis, Bashimoto's thyroiditis, parkinson's disease, and vasculitis. Disorders may be treated with the novel composition using gene therapy. This sequence represents a TALL-1 related protein of the

The invention relates to a method for inhibiting TACI (transmembrane activator and intracellular CAML interactor) and/or B cell maturation protein (BCMA) activity in a mammal. The method comprises administering a pecific binding partner for APRLI (GTO, a tumour necrosis factor-TNF family ligand), having the consensus region of TACI, BCMA, or the TACI/ BCMA extracellular consensus sequence, but not the extracellular region of TACI or TACI or BCMA. The method is useful for inhibiting activity of TACI and/or BCMA in a mammal which is useful for inhibiting activity of TACI or TACI or ECMA in a mammal which is useful for treating B-cell or T-cell lymphoproliferative disorders, one or more solid tumours such as lung, gastrointestinal, pancreatic or prostate tumour. APRLI, BCMA and TACI deragonists are useful for treating inflammation and immune function diseases such as diarrhoea, psoriasis, alexiples, promemonia, atophocidermaticis, respiratory allergic disease (asthma, hypersensitivity lung disease), drug and insect sting allergy, inflammatory bowel disease (multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, but neucographs, protozoal and viral infections (HIV), atherosclerosis, fungal, but he control or the skin or organs. The present sequence of the skin or organs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              is human-murine B cell maturation protein (BCMA) consensus sequence. The invention relates to a method for inhibiting TACI (transmembrane activator and intracellular CAML interactor) and/or B cell maturation protein (BCWA) activity in a mammal. The method comprises administering a specific binding partner for APRIL (G70, a tumour necrosis factor-TNF family ligand), having the consensus region of TACI, BCWA, or the TACI/BCMA extracellular consensus sequence, but not the extracellular region of TACI or BCWA. The method is useful for inhibiting activity of TACI and/or BCWA in a mammal which is useful for treating B-cell or T-cell lymphoproliferative disorders, one or more solid tumours such as lung, gastrointeetinal, pancreatic or prostate tumour. APRIL, BCWA and TACI antagonists are useful for treating inflammation and immune function diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic dermatitis, respiratory allergic disease (asthma, hypersensitivity lung disease), drug and insect sting allergy, inflammatory bowel disease (Crohn's disease, clitis), soleroderma, autoimmune disease (multiple sclerosis, rheumatoid arthritis, soleroderma, and murine B cell maturation protein (BCWA) consensus sequence is human-murine B cell maturation protein (BCWA) consensus sequence cystelne rich region. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of biolating to Carcinoma Associated Protein (CAP); (iii) for screening of bioactive agent capable of modulating the activity of CAP; (iv) for carcinoma; (vi) for inhibiting the activity of CAP; (iv) for treating carcinoma; (vi) for inhibiting the activity of CAP; (vi) for treating carcinoma; (vi) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as BNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CAP. Note: This patent is an equivalent to basic patent US2002182586A1, for which no sequence data was published
pain, swelling, anaemia, or septic shock. BR43x2, TACI, and BCWA polypeptides, fusions, antibodies, agonists or antagonists can be used to treat hypertension, renal artery stenosis, or occlusion, and cholesterol or renal emboli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         invention relates to novel DNA and protein sequences which
                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                            1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DB 7; Length 249;

Human ztnfr14 polynucleotides are used in claimed methods for detecting a genetic abnormality in a patient and for detecting a cancer in a patient. Recombinant ztnfr14 polypeptide, optionally conjugated to a toxin, is used in a claimed method of killing cancer cells. Ztnfr14 polypeptides can be used to detect ligands, adonists and antagonists. The polypeptides, polynucleotides and antibodies may also be used in methods that modulate tumor growth, metastasis, and immunity such as separating restring from attimulated immunity such as that of murine TNFR TACI. This sequence was compared with that of murine ztnfr14 ADZ67756 in the identification of ztnfr14 as a member of the TNFR family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Tumor necrosis factor receptor superfamily member 13b protein, SEQ: 54.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         necrosis factor receptor (TNFR) polypeptides, useful as ligands, and for modulating tumor growth, metastasis and such as separating resting from stimulated immune cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1;

New isolated mucin-like polypeptides, useful for diagnosing or treating, e.g. bacterial infections, allergic asthma, inflammation, allergic conjunctivitis, otitis, inflammatory bowel disease, Crohn's disease, lung
                                                                                                                                                                                                                                                The present invention relates to novel mucin-like proteins (I) and their coding sequences. The mucin-like proteins and coding sequences are useful in the therapy or in the prevention of a disease when the increase in the mucin-like activity of a polypeptide is needed e.g. bacterial infections, allergic asthma, inflammation, respiratory syncytial virus (RSV)-induced disease, allergic conjunctivitis, otitis, tissue injury, epithelial adenocarcinoma of the lung, lung cancer, gastric intestinal metaplasia, chronic cholecystitis, or skin cancer. The present sequence is a mucin glycoprotein which was used in a sequence alignment with the mucin-like
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Antibacterial; Virucide; Antiallergic; Antiasthmatic; Antiinflammatory; Ophthalmological; Auditory; Vulnerary; Gastrointestinal; Cytostatic; Gene Therapy; Mucin-like protein, human; mucin; bacterial infection; allergic asthma; inflammation; viral infection; allergic conjunctivitis; otitis; tissue injury; epithelial wounding; inflammatory; bowel disease; crohn; a disease; small adenocarcinoma of the lung; lung cancer; gastric intestinal metaplasia; chronic cholecystitis; skin cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated mucin-like polypeptides, useful for diagnosing or treating,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DB 8; Length 1569;

                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to a method of characterizing proteins present in the plasma membrane (PM) of live calls. The proteins of the invention are useful in identifying diagnostic markers and potential drugs. The invention is useful for identifying drugs for diagnosing and treating disorders such as cancer which are associated with abnormal representation of cell surface proteins. The present sequence is mouse tumor necrosis factor receptor superfamily member lib protein.

                                                                                                    The present invention relates to novel mucin-like proteins (I) and their coding sequences. The present sequence is one such human mucin-like protein. The mucin-like proteins and coding sequences are useful in the therapy or in the prevention of a disease when the increase in the mucin-like activity of a polypeptide is needed e.g. bacterial infections, allergic asthma, inflammation, respiratory syncytial virus (RSV)-induced disease, allergic conjunctivitis, otitis, tissue injury, epithelial wounding, inflammatory bowel disease, Crohn's disease, small adenocarcinoma of the lung, lung cancer, gastric intestinal metaplasia, chronic cholecystitis, or skin cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated mucin-like polypeptides, useful for diagnosing or treating, e.g. bacterial infections, allergic asthma, inflammation, allergic conjunctivitis, otitis, inflammatory bowel disease, Crohn's disease, lung cancer, or skin cancer.
e.g. bacterial infections, allergic asthma, inflammation, allergic conjunctivitis, otitis, inflammatory bowel disease, Crohn's disease, lung cancer, or skin cancer.

                                The present invention relates to novel mucin-like proteins (I) and their coding sequences. The present sequence is one such human mucin-like protein. The mucin-like proteins and coding sequences are useful in the therapy or in the prevention of a disease when the increase in the mucin-like activity of a polypeptide is needed e.g. bacterial infections, allergic asthma, inflammation, respiratory syncytial virus (RSV)-induced disease, allergic conjunctivitis, oritis, tissue injury, epithelial wounding, inflammatory bowel disease, Crohn's disease, small adenocarcinoma of the lung, lung cancer, gastric intestinal metaplasia, chronic cholecystitis, or skin cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to novel mucin-like proteins (I) and their coding sequences. The invention describes a transgenic mouse (I) comprising a disruption in an subtilisin-like protein convertase (SPC6) gene, where there is no native expression of an endogenous SPC6 gene. The therapeutic agent is administered by inhalation or insufflation or cal, buccal, buccal, parenteral, intraocular, intraperitoneal, intravenous, intrapleural, intraocular, intraperitoneal, parenteral, intraocular, intraperitoneal, or rectal route. The transgenic mouse and associated methods are useful for identifying potential therapeutic associated with SPC6 agonists and antagonists) for treating conditions associated with SPC6. The identified agents are potentially useful for treating diseases such as schizophrenia. The mouse is useful for sequence of mouse SPC6.
                                                                                                                                                                                                                                 1;
adenocarcinoma of the lung, lung cancer, gastric intestinal metaplasia, chronic cholecystitis, or skin cancer.

This sequence shows a murine subtilase. The homologous human subtilase coding sequence is located on chromosome 9421.13. Related EST's are expressed in kidney (renal cell adenocarcinoma), head and neck tissue, heart, multiple sclerosis lesions, cervix, pooled germ cell tumours. Uterus tumour, adenocarcinoma, retina ii and stomach. The subtilisin cuterus tumour adenocarcinoma, retina ii and stomach. The subtilisin convertase subtilisin. There are two blocks of 11 furincomman proprotein convertase subtilisin. There are two blocks of 11 furincommembrane domain, also in the C-terminal portion, suggesting that the transmembrane domain, also in the C-terminal portion. Suggesting that the potent is localised on the outside of the membrane. The subtilase compounds, which may act as agonists or antagonists at the receptor site and which can be regulated to provide therapeutic effects. Ocerors comprising the collocatide are useful for modulating the activity of subtilase in a disease, e.g. a central nervous system disorder, a gestrointestinal catisorder, cancer, a cardiovascular disorder, a genitourinary disorder, cancer, a partin, polvit pain, colon tumour, pre-oesophageal dysphagia, cransplant rejection, pelvit pain, colon tumour, pre-oesophageal dysphagia, congestive heart failure, myocardial infarction, ovary tumour, lung tumour, thyroid tumour, carcinoma, lymphoma, Kaposi's sarcoma, congestive heart failure, myocardial infarction, ischaemia, hypertensive comgestive heart failure, myocardial side useful for preventing or ameliorating the diseases eited above
                                                                                                                                                                                                                                                                                                                                                                                    pooled germ cell; tumour, uterus; adenocarcinoma; retina II; stomach; proprotein convertase subtilisin; furin-like repeat; Alzheimer's disease; Parkinson's disease; pain; colon; pelvic pain; pre-oesophageal dysphagia; gastritis; ulcers; urinary incontinence; lupus nephritis; renati rejection; myocardial infarction; erectile dysfunction; ovary; lung; thyroid; carcinoma; lymphoma; Kaposi's sarcoma; congestive heart failure; ischaemia; hypertensive vascular disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New subtilase-encoding polynucleotide and its encoded protein, useful for identifying modulators of subtilase activity, and in gene therapy for treating e.g. Alzheimer's disease, cancers, congestive heart failure or

The method comprises administering a specific binding partner for APRIL (GTO, a tumour necrosis factor-TNF family ligand), having the consensus region of TACI, BCMA, or the TACI/BCMA extracellular consensus sequence, but not the extracellular region of TACI or BCMA. The method is useful for inhibiting activity of TACI and/or BCMA in a mammal which is useful for treating B-cell or T-cell lymphoproliferative disorders, one or more solid tumours such as lung, astrointestinal, pancreatic or prostate tumour. APRIL, BCMA and TACI antagonists are useful for treating inflammation and immune function diseases such as diarrhoea, psoriasis, alergies, pneumonia, atopic dermatitis, respiratory allergic disease (asthma, hypersensitivity lung disease), drug and insect sing allergy, inflammatory bowel disease (Crohn's disease, colitis), scleroderma, autoimmune disease (multiple cleases), thus and insect sting allergy, inflammatory bowel disease (acthma shortozoal and viral infections (HIV), atherosclerosis, cancer with leucocyte infiltration of the skin or organs. The present sequence

The invention relates to a novel TALL-1 antagonist protein, comprising a sequence that differs from SEQ ID NO:2, or amino acids 134-285 of SEQ ID NO:2, by at least one modification in the region connecting &bgr; strands D and E that reduces the biological activity of the TALL-1 antagonist as immunosuppressive, antirheumatic, attinifiammatory, antiathritic, dermatological, antidiabetic, neuroprotective, antithyroid, antipyretic, neuroprotective, antithyroid, antipyretic, newportory, antiathritic, and vasotropic activity. A TALL-1 antagonist may be used in a vaccine. A protein of the invention is useful for inhibiting TALL-1 biological activity in a mammal. TC is useful for treating autoimmune diseases, rheumatoid arthritis, systemic lupus erythematosus, insulin dependent diabetes mellitus, multiple sclerosis, myasthaenia gravis, Grave's disease, autoimmune hemolytic anaemia, autoimmune

(I) is useful for modulating AGP-3-related activity in mesenteric lymph nodes (MLM) of a mammal. (II) is useful in related to AGP-3H related protein and for identifying compounds (agonists or antagonists) that interact with AGP-3R proteins. (II) is also useful for identifying intracellular proteins that interact with the respective cytoplasmic domains by yeast two-hybrid soreaning process. (II) is in node, spleen, and Peyer's patches. AGP-3R agonists and antagonists involved in B cell growth, surrival and activation particularly in lymph node, spleen, and Peyer's patches. AGP-3R agonists and antagonists dentified using (II) are used for modularing B cell response and are used to treat diseases characterised by inflammatory processes or deregulated immune response such as rheumatoid arthritis, graft-versus-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            dermatological; neuroprotective; nootropic; immunomodulator; metabolic; antidiabetic; analgesic; nephrotropic; osteopathic; cytostatic; fever; antidiabetic; analgesic; nephrotropic; osteopathic; cytostatic; fever; antidiatemen; antipartine; vasotropic; antibacterial; asthma; AGP-3 receptor; tumour necrosis factor ligand family; AGP-3 receptor; rheumatorid arthritis; graft-versus-host disease; immune disorder; rheumatoid arthritis; graft-versus-host disease; Crohn's disease; panctrophic lateral sclerosis; ALS; Alzheimer's disease; disease; alsoherulonephritis; inflammatory bowel disease; ischaemia; multiple sclerosis; Parkinson's disease; transgenic animal.
thrombocytopenic purpura, Goodpasture's syndrome, pemphigus vulgaris, acute rheumatic fever, post-streptococcal glomerulonephritis and polyarteritis nodosa. The present sequence represents a cysteine rich domain (CRD) module of human TACII.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Composition, useful for identifying modulator of receptor for treating asthma and glomerulonephritis, comprises AGP-3 (tumor necrosis factor ligand family member) receptor and encoding nucleic acids.
                                                                                                                                                                                         Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention provides novel tumor necrosis factor receptor (TNFR) ztnfr14 polynucleotides ADZ67753 and polypeptides ADZ67754, expression vectors and antibodies. Ztnfr14 polynucleotides are used in claimed methods for detecting a genetic abnormality in a patient and for detecting a cancer in a patient. Recombinant ztnfr14 polypeptide, optionally conjugated to a toxin, is used in a claimed method of killing cancer cells. Ztnfr14 polypeptides and be used to detect ligands, agonists and antagonists. The polypeptides, polynucleotides and antibodies may also be used in methods that modulate tumor growth, metastasis, and immunity such as separating resting from stimulated

                                                                                                                                                                                                                                                                      8888888
                                                                                                                                                                     8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a method for inhibiting TACI (transmembrane activator and intracellular CAML interactor) and/or B cell maturation protein (BCMA) activity in a mammal. The method comprises administering a pecific binding partner for APRIL (G70, a tumour necrosis factor-TNF family ligand), having the consensus region of TACI, BCMA, or the TACI/ BCMA extracellular consensus sequence, but not the extracellular region of TACI or BCMA. The method is useful for inhibiting activity of TACI and/or BCMA in a mammal which is useful for treating B-cell or T-cell candor BCMA in a mammal which is useful for treating B-cell or T-cell candor BCMA and TACI and activity of alternative disorders, one or more solid tumours such as lung. Tymphopproliferative disorders, one or more solid tumours along a nung. Cantesgonists are useful for treating inflammation and immune function diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic dermatitis, respiratory allergic disease (asthma, hypersensitivity lung disease), drug and insect sting allergy, inflammatory bowel disease
                                                                                                               1,
                                                                                                                                                                                                                                                                                                                                                 Human; transmembrane activator and intracellular CAML interactor; TACI; cytostatic; B cell maturation protein; BCMA; tumour necrosis factor; TNF; lymphoproliferative disorder; tumour; lung; gastrointestinal; pancreatic; prostate; inflammation; immune disorder; diarrhoea; psoriasis; colitis; drug allergy; dermatitis; pneumonia; asthma; inflammatory bowel disease; Crohn's disease; scleroderma; autoimmune disease; multiple sclerosis; human immunodeficiency virus; HIV; systemic lupus erythematosus; cancer; rheumatoid arthritis; atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Inhibiting activity of B cell maturation protein and/or transmembrane activator and intracellular cyclophilin ligand interactor, by administering a binding partner for APRIL, a tumor necrosis factor family
immune cells. The present sequence is that of the Cys-rich domain of human TNFR TACI ADZ67771. This sequence was compared with that of ztnfr14 in the identification of ztnfr14 as a member of the TNFR family.

This is the amino acid sequence of the N-terminal, i.e. the extracellular, domain of novel human transmembrane activator and CAML-extracellular, domain of novel human transmembrane activator and CAML-interactor (TACI) protein (see AAW15783). TACI is a lywphoryte receptor protein that is involved in the calcium activation pathway. It is normally present in B-lymphocytes, and to a much lesser extent in immature T-lymphocytes, and can therefore be targetted to specifically cregulate B cell responses without affecting T cell activity. The extracellular domain of TACI functions as a binding site for a ligand that stimulates the activation of the cell by inducing the binding of the CTC terminal portion (see AAW75784) of TACI to the N-terminal domain of CAML. A recombinant form of the extracellular portion of TACI acts as cominant-negative or blocking agent and acts to suppress the immune system. It can be used to treat or prevent autoimmune disease, graft rejection or graft versus host disease. The extracellular region is also used in a claimed method for identifying a ligand for TACI, in which binding of a candidate molecule is determined by detecting cellular
                                                                                                                                                                                                                                                                                                                                                                            ä
(Crohn's disease, colitis), scleroderma, autoimmune disease (multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, bacterial, protozoal and viral infections (HIV), atherosclerosis, cancer with leucocyte infiltration of the skin or organs. The present sequence is human TACI cysteine-rich extracellular region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated transmembrane activator protein - used to develop products for treating e.g. infections, cancers, autoimmune and inflammatory conditions, transplant rejection or graft-versus-host disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a method for inhibiting TACI (transmembrane activator and intracellular CAML interactor) and/or B cell maturation protein (BOKA) activity in a mammal. The method comprises administering a specific binding partner for APRIL (G70, a tumour necrosis factor-TNF family ligand), having the consensus region of TACI, BCWA, or the TACI/ BCWA extracellular consensus sequence, but not the extracellular region of TACI or BCWA. The method is useful for inhibiting activity of TACI and/or BCWA in a mammal which is useful for treating B-cell or T-cell lymphoproliferative disorders, one or more solid tumours such as lung, castrointestinal, pancreatic or prostate tumour. APRIL, BCWA and TACI antagonists are useful for treating inflammation and immune function diseases such as diarrhoa, psoriasis, allergies, pneumonia, atopic dermatting, respiratory allergic disease (asthma, hypersensitivity lung disease), drug and insect sting allergy, inflammatory bowel disease (activity lung crohn's disease, colitis), scleroderma, autoimmune disease (multiple

Also described: (1) a homotrimeric protein complex comprising the polypeptide; (2) an expression vector comprising the following operably linked elements, a transcription promoter, the nucleic acid sequence encoding the polypeptide, and a transcription terminator; (3) a cultured cell into which has been introduced the expression vector, where the cell expresses the polypeptide; (4) producing a homotrimeric protein complex, and (5) inhibiting tumour necrosis factor (TNF) 4-induced complex. The polypeptide has antiinflammatory, antiarthritic, antiinfluenmatic, immunosuppressive, antiarteriosclerotic and cytostatic
sclerosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, bacterial, protozoal and viral infections (HIV), atherosclerosis, cancer with leucocyte infiltration of the skin or organs. The present sequence is human TACI protein extracellular domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 transmembrane activator and CAML interactor; TACI; extracellular domain; trinerising polypebtide; homotrimeric protein complex; antiinflammatory; antiartric; antiinflammatory; antiartric; anticheumatic; immunosuppressive; antiarteriosclerotic; cytostatic; gene therapy; inflammatory disease; rheumatoid arthritis; inflammatory bowel disease; autoimmune disease; atherosclerosis; osteoporosis; allograft rejection; cancer; human; heat shock binding protein; HSBP; fusion protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New polypeptide comprising an extracellular domain of the transmembrane activator and calcium-signal modulating cyclophilin ligand (CAML) interactor (TACI), and a trimerizing polypeptide, useful for treating
                                                                                                                                                                                                  Gaps

activities, and can be used in gene therapy. The polypeptides are useful for treating and controlling inflammatory diseases, e.g. rheumatoid arthritis or inflammatory bowel disease, autoimmune disease, attherocalerosis, osteoporosis, allograft rejection and cancer. The present sequence represents a human TACI and heat shock binding protein (HSBP) fusion protein fragment, which is used in the exemplification of the present invention.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Description

NyAlternate names: ubiquitin fusion protein
Cispecies: Nicotiana tabacum (common tobacco)
Cispecies: Nicotiana tabacum (common tobacco)
Cipate: 31-Dec-1990 #sequence_revision 31-Dec-1990 #text_change 09-Jul-2004
Ciscossion: 51032

Unifornate names: P55 tumor necrosis factor receptor; TNF receptor type 1

N;Contains: tumor necrosis factor alpha inhibitor; tumor necrosis factor binding protein
C;Species: Homo sapiens (man)
C;Date: 30-Jun-1992 #sequence revision 30-Jun-1992 #text change 09-Jul-2004

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A; Accession: A34899
A; Molecule type: mRNA
A; Molecule type: mRNA
A; Cossion: 1-655 < LOE2
A; Cossion: 1-655 < LOE2
A; Cossion: 1-655 < LOE2
A; Cossion: 1-650 < LOE3
A; Experimental source: placenta
A; Note: part of this sequence, including the amino end of the mature protein, confirmed
